MULTIFUNCTIONAL GAS CONTROL

CONTROL KNOB (OFF, PILOT, ON)

**TEMPERATURE SELECTION KNOB
ON-OFF REGULATING THERMOSTAT**

THERMOELECTRIC SAFETY DEVICE

THERMOSTATIC MULTIFUNCTIONAL CONTROL

Multifunctional safety control with thermoelectric flame failure device, pressure adjuster with override device and on-off thermostat. No external electric power supply required.

610 AC3 is specifically designed for use with gas water storage heaters.

MAIN FEATURES

- Three-position control knob: off, pilot, on.
- Temperature selection knob.
- Thermoelectric flame failure device.
- Pressure adjuster with override device.
- On-off type thermostat.
- Resettable safety thermostat.
- Pilot outlet with gas flow preselection screw.
- Inlet and pilot filters.
- Inlet and outlet pressure test points.

Data refer to EN 126

DIMENSIONS

FLOW RATE AS FUNCTION OF PRESSURE DROP

Standard

I Family (d = 0.45)	Q = 4.3 m ³ /h	Δp = 5 mbar
II Family (d = 0.6)	Q = 3.7 m ³ /h	Δp = 5 mbar
III Family (d = 1.7)	Q = 4.6 kg/h	Δp = 5 mbar

Ignition

Depress and turn the control knob to the pilot position ✱ .

Depress the button and ignite the pilot flame while keeping the knob fully depressed for a few seconds (fig. 1).

Release the knob and check that the pilot flame stays lit. If it goes out, repeat the ignition operation.

fig. 1

Main burner ignition

Depress and turn the control knob to the position corresponding to symbol | . On release, the knob returns to the ON position 🔥 . Turn the temperature selection knob to the point corresponding to the desired temperature (fig. 3).

fig. 2

Pilot position

To close the main burner and keep the pilot flame on, depress and turn the control knob to the pilot position ✱ (fig. 1).

fig. 3

Shutdown

Turn the control knob to the OFF position ● (fig. 4).

CAUTION: after shutting down, wait at least two minutes before re-igniting so as to allow the flame failure device to return to the safety position.

fig. 4

INSTALLATION

Main gas connection

The connection is made using gas pipes with Rp 1/2 ISO 7 threading (the valve is available with 0.75-18 UNS 2B outlet on request). Torque: 25 Nm.

Water connection

The connection flange threading is Rc 3/4 ISO 7 (3/4 NPT on request).

Connection to the pilot burner

Pipes with a 4 mm, 6 mm or 1/4 diameter can be used. Use a nut and olive of appropriate dimensions. Tighten to 7 Nm torque.

Thermocouple connection

Connect the thermocouple to the magnet unit, checking that the fixing connection is properly dimensioned. Torque: 3 Nm.

After making the gas connections, check tightness and that the appliance is operating properly.

Adjusting the outlet pressure

This adjustment must be made with the thermostat bulb cold and the knob in position 5.

Take off the temperature adjustment knob (A). Check that the pressure adjustment override screw (NO P.R.) is screwed out completely. Screw in the screw (P.R. ADJ.) to increase the outlet pressure or screw it out to reduce it.

Overriding the pressure adjuster

Screw the screw (NO P.R.) fully in.

Adjusting the gas flow rate to the pilot

Screw in the screw (PILOT ADJ.) to reduce the flow, or screw it out to increase it. To put the pilot gas flow adjuster out of service, fully screw in the screw (PILOT ADJ.) and then screw it back two complete turns.

IMPORTANT

At the end of all setting and adjustment operations, check gas tightness and that the appliance is operating properly.

Taking off temperature adjustment knob

Adjusting the outlet pressure and the flow rate to the pilot

Implement the provisions in the Use and Maintenance manual - code 9.956.610 - for installation, adjustment and use
